1.You have a button with the ID "myButton". How do you show an alert on click?

We use JavaScript to add a click event listener and call alert().

```
<button id="myButton">Click</button>
<script>
document.getElementById("myButton").addEventListener("click", function () {
   alert("Button clicked!");
});
</script>
```

2. How do you change the text content of an element with ID "myElement"?

We use textContent in JavaScript.

```
document.getElementById("myElement").textContent = "New text";
```

3. Compare Promises and callbacks in JavaScript. When to prefer each?

Callbacks-A function passed as an argument to another function and executed later

Promises-It is used in Application Programming Interface.It represents the result of an event.promise has 3 stages

1st stage-pending

2nd stage-fullfilled

3rd stage-rejected

4. How do you create a responsive horizontal navigation menu using HTML and CSS?

Use <nav> with an unordered list and CSS Flexbox for horizontal layout and responsiveness.

5. How do you create a footer with copyright and social media icons?

```
<footer class="media">
  <p>My Website</p>
  <span>Facebook | Twitter | Instagram</span>
  </footer>
.media {
```

```
    text-align: center;
    background: lavender;
    color: blac;
    padding: 10px;
  }
```

6. How do you add hover effects to an "Add to Cart" button?

Use the :hover pseudo-class and CSS transitions.

```
button:hover {

   background-color: orange;
   transform: scale(1.05);
}
```

7. How can CSS background images or gradients enhance design?

They improve visual appeal by adding depth, contrast, and branding without extra images.

```
body{

    background-image: url('image.jpeg');
    background-color: lightblue;

}
```

8. How do you add hover effects to buttons or links using CSS?

Use :hover to change color, size, or add animation.

```
a:hover {
   color: red;
}
```

9. How do you create external, internal, and email links using <a> tags?

```
<a href="https://google.com">External</a>
<a href="about.html">Internal</a>
<a href="mailto:kumudhashree2004@gmail.com">Email</a>
```

10. What is the purpose of the <meta> tag in HTML?

It provides metadata like character encoding, viewport settings, and SEO (Search Engine Optimization) information to browsers and search engines.
